Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, Group I, are drawn to semiconductor device, classified in class 257, subclass 734⁺. *926*
 - II. Claims 21-26, Group II, are drawn to method of making, classified in class 438, subclass 597⁺.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the circuit patterns can be made by depositing conductive material on a patterned insulating layer on a substrate; planarizing the conductive material so that the conductive material formed in the pattern is level with the insulating layer; removing the insulating layer so exposed; and depositing first, second and third insulating layers over the substrate.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
